Real-time location, security and disposition of seized property and evidence

EVIDENCE TRACKER SOFTWARE

Evidence Tracker is your command center for managing the location and status of seized property and evidence, and is rapidly configurable for your exacting data, tracking, workflow, security and reporting requirements. Successfully deployed solutions since 2006.

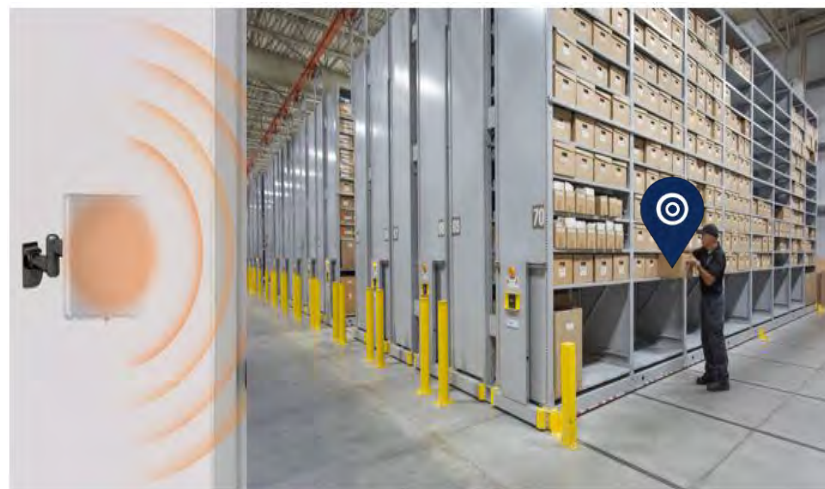

- Evidence Tracker is fully developed and ready for deployment, including management of weapons, narcotics, currency/valuables, DNA, vehicles and property and corresponding documentation
- Evidence Tracker is optimized for managing police evidence, and enables integration with your backend database management applications, for data synchronization
- Authenticates personnel that are authorized to receive evidence through ID card/software lookup, fingerprint or PIN #
- Supports electronic signature pads and PIN # entry to validate transfer-of-custody
- Maintains audit trail records for every property and evidence item, from time of origination through final disposition

TRACKING AND SENSOR TECHNOLOGIES

Evidence Tracker supports industry leading manufacturers of tracking technologies, including being a Zebra certified partner...the top tracking and sensor technology manufacturer globally.

- Enables barcode and/or RFID identification of each storage area, cabinet, shelf, bin, floor area or pallet so that property and evidence can be tracked to exacting physical locations
- Mobile scanners and tablets enable rapid inventories of property and evidence, from close proximity with barcodes or 20'+ detection distances with RFID.
- Mobile scanners enable rapid location of 'missing' evidence, using cold-warm-hot color scale, 0 to 100 numeric index and the frequency of scanner audible beeps.
- Supports long range tracking technologies of 100's of feet, such as for an impound yard or outdoor property/evidence storage area.

SECURITY TECHNOLOGIES

Evidence Tracker integrates with leading access control, surveillance cameras, light alerts, audible horns, fingerprint pads and electronic signature pads to track and protect property and evidence at all times.

- Evidence Tracker provides tight chain-of-custody from intake to final disposition, with audit trail records of every view or movement of property and evidence
- Networked-connected antennas and motion sensors identify property and evidence approaching tracking zones or doorways, and triggers alarms, lights and video cameras if not authorized for movement or removal, and including software, SMS and email alerts
- Personnel authentication is provided by software look-up of photo and data, fingerprint scan or entry of PIN # to ensure compliance
- Transfer-of-custody is provided by electronic signature or PIN #
- Digital scales ensure correct weights of narcotics

TURN-KEY DEPLOYMENTS AND ONGOING SUPPORT

Evidence Tracker solutions are designed collaboratively with customer input and systems are turnkey including software, hardware and services. Tracking Systems and our local resellers provide ongoing support in perpetuity.

- Software is rapidly configured for each customer's exacting data, workflow, tracking, security and reporting requirements
- Software is loaded to local on-premises servers or is deployed as a cloud-based solution utilizing leading platforms, like Azure or AWS
- Hardware is installed and benchmarked to ensure that performance metrics are being met for all hardware components of the system
- RFID and barcode tags are provided for all item-types and tested to ensure proper performance
- System is supported in perpetuity by TrackingSystems^{IoT} and by your local reseller to assure long-term sustainability.
